

# RIM-5

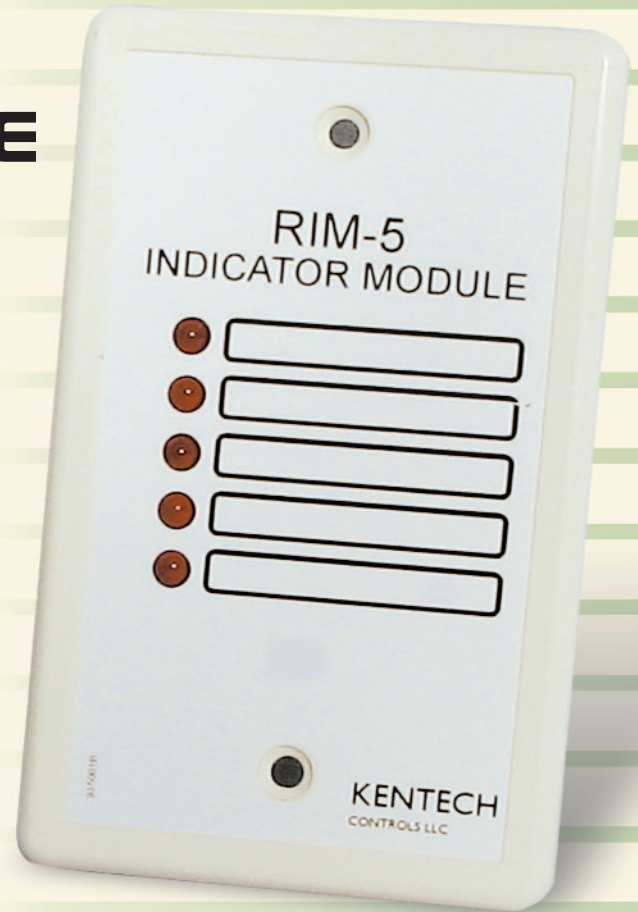

**KENTECH**  
CONTROLS LLC

## REMOTE INDICATION MODULE

### DESCRIPTION

The **RIM-5** is a five channel 24V Indication Module for use on its own or with a single RAM™ (optional audible alarm module) and multiple controls or alarm sensing devices. The **RIM-5** contains five LED lamps on a standard size wallplate. When an alarm is initiated by a contact closure feeding 24V to one of the channels of the **RIM-5**, the corresponding LED is illuminated, and the 24V signal is passed on to the RAM™ for an audible alarm. With a glance, the **RIM-5** allows the user to visually determine which alarm has been initiated. Safe class 2 wiring allows easy remote mounting from the control location.

The **RIM-5** is ideal for use with leak detection, temperature, pressure or humidity controls, in order to provide multiple point alarm systems. Up to five controls may be used with the **RIM-5**. A box next to each LED allows the user to label the application being monitored. Just write in a description with pen or marker and the user can quickly determine which area is in alarm when the LED is illuminated.

### SPECIFICATIONS

Input: 5, 24V AC/DC +/-10%;1.5VA

Output: 24V Halfwave dc to RAM™

Operating Temperature: -30° to 130°F

Operating Humidity: 0-95%, non-condensing

RoHS Compliant Made in USA
